DSA01NM
Wireless Thermostat Kit

Wise Decision.
It's an Amana® brand.

Total guest comfort controls

The Amana® brand DSA01NM Wireless Thermostat Kit brings together the modern look, feel and ease of use you can expect from the Amana brand PTACs. The DSA01NM kit includes both the thermostat and antennae with radio frequency (RF) transmissions for two-way communication between the unit and the thermostat. The kit is easy to install. Simply mount the antennae behind the front cover of your Amana Digital LED PTAC with a single connector. With the push of a button you can connect to your PTAC and start enjoying the comfort and ease of the Amana brand wire—and worry—free.

Features include:

- 2-way wireless communication between PTAC and thermostat
- Communication without a line of sight
- Easy to install single connector for antennae communication
- One-button connection to the thermostat
- Backlit display
- AA battery-powered (batteries included)

The DSA01NM kit is designed as a wireless thermostat, but does not support the full line of benefits available to you with the full EMS thermostat system. Additionally, by upgrading to the DigiSmart™ EMS package you can save up to 35% on your PTAC energy use compared to models without the DigiSmart™ EMS package. You can also select from the web/internet communications & monitoring options. Call your Amana brand PTAC sales representative for detailed differences from the DSA01NM non-mesh RF wireless thermostat versus the full EMS system.
